EXAMINER

SON, LINH L D

ART UNIT PAPER NUMBER

2135

DATE MAILED: 10/11/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/882,491

Applicant(s)

GOLAND, YARON

Examiner

Linh LD Son

Art Unit

2135

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 August 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 08/06.

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This Office Action is responding to the RCE received on 08/22/06.
2. Claims 19-20 are newly added claims.
3. Claims 1-20 are pending.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hind et al, US Patent No. 6772331B1, hereinafter "Hind", in view of Dondeti et al, US Patent No. 7013389, hereinafter "Dondeti".

6. As per claim 1:

Hind teaches "A branding process to establish a trust web of networked computing devices on an open multi-access network, comprising:

Securely networking a security-uninitialized device with a branding device via a secured network medium" in (Col 9 lines 25-40);

"Electronically imprinting the security-uninitialized device with group membership and cryptographic key data by the branding device via the secured network medium" in (Col 9 lines 25-40), the cryptographic key data for verifying group membership information provided by other devices on the open multi-access network to the security-uninitialized device are authenticated by the branding device" in (Col 9 lines 15-60, creating a trust between the devices); and

Initializing the security-uninitialized device to use the cryptographic key data to authenticate group membership of other devices interacting with security-un-initialized device on the open multi-access network, and to provide the security-uninitialized device is a member of the trust web, such that at least some interaction via the open multi-access network with the security-uninitialized device is cryptographically secured to only other devices in the trust web" in (Col 10 lines 18-29, and Col 11 line 5 to Col 12 line 20 and Col 9 lines 35-60). Hind further teaches of having additional fields including user group associations, access control groups in the signed certificate.

However, Hind does not specifically disclose a method of utilizing the group membership information with other branded devices in an open multi-access network.

Nevertheless, Dondeti discloses the "Dual Encryption Protocol for scalable secure group communication" invention, which includes a method of joining a uninitialized device into a group by providing a group membership certificate to the uninitialized device. The initialized device with the group membership certificate can send

Art Unit: 2135

the group membership certificate to other member in the group for authentication" in (Col 4 line 57 to Col 5 line 21).

Therefore, it would have been obvious at the time of the invention was made for one having ordinary skill in the art to modify Hind's invention to incorporate Dondeti's teaching to implement the group joining between group members without interposing a central authority.

7. As per claims 2 and 13:

Hind teaches "A branding process to establish cryptographically secured interaction among networked computing devices within a trust group on an open multi-access network, comprising:

securely networking a security-un-initialized device with a branding device via a secured network medium (Col 9 lines 25-40);

transmitting a branding certificate from the branding device to the security-un-initialized device via the secured network medium (Col 9 lines 25-40), the branding certificate instructing that the security-un-initialized device trust the branding device (Col 9 lines 15-60, creating a trust between the devices), the branding certificate further containing key data for verifying certificates provided by other devices on the open multi-access network to the security-un-initialized device are authenticated by the branding device (Col 9 lines 35-60);

transmitting a trust group membership certificate signed by the branding device to the security-un-initialized device via the secured network medium, the trust group

Art Unit: 2135

membership certificate containing a signed group name as well as a signed key identifying the security-un-initialized device such that, when the security-un-initialized device sends the trust group certificate to a branded device which is a member of the trust group, the trust group certificate is validated by the branded device, and the branded device verifies that the security-un-initialized device is a member of the trust group of devices referred to by the group name (Col 10 lines 18-29); and initializing a security resolver of the security-un-initialized device to use the key data of the branding certificate to authenticate other devices interacting with the security-un-initialized device on the open multi-access network are in the trust group (Col 10 lines 18-29, and Col 11 line 5 to Col 12 line 20), and to provide the trust group membership certificate to such other devices as authentication that the security-un-initialized device is a member of the trust group (Col 10 lines 18-29, such that at least some interaction via the open multi-access network with the security-un-initialized device is cryptographically secured to only other devices in the trust group (Col 9 lines 15-60)". Hind further teaches of having additional fields including user group associations, access control groups in the signed certificate.

However, Hind does not specifically disclose a method of utilizing the group membership information with other branded devices in an open multi-access network.

Nevertheless, Dondeti discloses the "Dual Encryption Protocol for scalable secure group communication" invention, which includes a method of joining a un-initialized device into a group by providing a group membership certificate to the un-initialized device. The group membership certificate also includes group identity and

Art Unit: 2135

other information to further authenticate the un-initialized device to a group (See Figure 3 & 4 and Col 5 lines 1-20). The initialized device with the group membership certificate can send the group membership certificate to other member in the group for authentication" in Col 4 line 57 to Col 5 line 21).

Therefore, it would have been obvious at the time of the invention was made for one having ordinary skill in the art to modify Hind's invention to incorporate Dondeti's teaching to implement the group joining between group members without interposing a central authority.

8. As per claim 3:

Hind and Dondeti teach "The branding process of claim 2 wherein securely networking the security-un-initialized and branding devices comprises networking the devices via a limited access network interface of the security-un-initialized device that is separate from the security-un-initialized device's interface to the open multi-access network" (Col 11 lines 5-65).

9. As per claim 4:

Hind and Dondeti teach "The branding process of claim 3 wherein the limited access network interface is of a direct device-to-device wired networking medium (Col 1 line 65 to Col 2 line 1).

Art Unit: 2135

10. As per claim 5:

Hind and Dondeti teach "The branding process of claim 3 wherein the limited access network interface is of a directional wireless networking medium" in (Col 1 line 55 to Col 2 line 10).

11. As per claim 6:

Hind and Dondeti teach "The branding process of claim 2 wherein securely networking the security-un-initialized and branding devices comprises: placing transmitter/receivers of the security-un-initialized and branding devices for an omni-directional wireless networking medium into a wave guide and/or Faraday cage; and networking the devices with the wave guide and/or Faraday cage via the omni-directional wireless networking medium" in (Col 1 line 55 to Col 2 line 10).

12. As per claim 7:

Hind and Dondeti teach "The branding process of claim 2 further comprising: transmitting a principal identifier from the branding device to the security-un-initialized device, the principal identifier providing a cryptographically secured identity to the security-un-initialized device, the principal identifier containing a public/private key pair; and using the public/private key pair to encrypt interaction of the security-un-initialized device with said other devices authenticated to be in the trust group" in (Col 11 lines 5-

Art Unit: 2135

65).

13. As per claim 8:

Hind and Dondeti teach "The branding process of claim 7 wherein the principal identifier further contains a name for the security-un-initialized device, the process further comprising identifying the security-un-initialized device to human operators using the name" in (Col 12 lines 45-65).

14. As per claim 9:

Hind and Dondeti teach "The branding process of claim 8 further comprising prompting a human user of the branding device to enter the name upon performing the branding process on the security-un-initialized device" in (Col 12 lines 45-65).

15. As per claim 10:

Hind and Dondeti teach "The branding process of claim 2 further comprising initially distributing the security-un-initialized device in a retail channel prior to having the branding process performed on the security-un-initialized device" in (Col 5 lines 25).

16. As per claim 11:

Hind and Dondeti teach "The branding process of claim 10 further comprising upon completion of initializing the security resolver, disallowing the security-un-initialized device from having the branding process again performed on the security-un-initialized device until the now initialized security of the security-un-initialized device is reset" in (Col 13lines 35-43).

17. As per claim 12:

Hind and Dondeti teach "The branding process of claim 10 further comprising upon completion of initializing the security resolver, allowing the branding process to be performed only via a limited access network interface of the security-un-initialized device" in (Col 4 line 53 to Col 5 line 5).

18. As per claim 14:

Hind and Dondeti teach "The networked computing device of claim 13 further comprising: a limited access networking interface; and the security initializer further operational to accept the branding public key when received from the branding device only via the limited access networking interface" in (Col 11 lines 5-45).

19. As per claim 15:

Hind and Dondeti teach "The networked computing device of claim 13 further comprising: the security initializer further operational to accept the branding public key when received from the branding device via the network interface when in an initial unbranded state; and a branding reset operational upon activation to return the security initializer to the initial unbranded state" in (Col 13 lines 35-43).

20. As per claim 16:

Hind and Dondeti teach "The networked computing device of claim 13 further comprising: a branding mode activator operational to place the networked computing device in a branding mode; and the security initializer further operational to accept the branding public key when received from the branding device via the network interface when in the branding mode" in (Col 11 lines 5-45).

21. As per claim 17:

Hind and Dondeti teach "The networked computing device of claim 13 further comprising: the security resolver further operational when initialized with a trust group membership certificate to provide the trust group membership certificate to other devices via the network interface to attest to membership of the networked computing in the trust group; and the security initializer further operational to receive the trust group membership certificate from the branding device while securely networked to the

Art Unit: 2135

networked computing device, and further operational to initialize the security resolver with the trust group membership certificate" in (Col 9 lines 15-65, and Col 10 lines 24-30).

22. As per claim 18:

Hind and Dondeti teach "The networked computing device of claim 13 further comprising: the security resolver further operational when initialized with a public/private key pair to encrypt interaction via the network interface with other devices authenticated as in the trust group using the public/private key pair; and the security initializer further operational to receive the public/private key pair from the branding device while securely networked to the networked computing device, and further operational to initialize the security resolver with the public/private key pair" in (Col 11 lines 5-65).

23. As per claim 19:

Dondeti discloses "The branding process of claim 1, wherein the group membership information comprises a certificate signed by the branding device and containing a signed group name as well as signed information naming the security-un-initialized device such that, when the security-un-initialized device provides the certificate to a branded device which is a member of the trust web, the certificate is validated by the branded device, and the branded device verifies that the security-

uninitialized device named in the certificate is a member of the trust group of devices referred to by the group name" in (Col 4 line 57 to Col 5 line 21).

24. As per claim 20:

Dondeti discloses "The networked computing device of claim 13, wherein:

Each trust group membership certificate is sent by an other device and each trust group membership certificates comprises:

A signed name for a trust group (Group Name or group ID);

A signed identifier (host public key, Host ID) for the other devices sending the trust group membership certificate" in (Figure 1, 3); and

"The security resolver is configured to authenticate trust group membership certificateds by:

Authenticating, from the trust group membership certificate, the signed name for the trust group and the signed identifier for the other device sending the trust group membership certificate using the branding public key" in (Col 6 lines 10-55); and

Wherein the signed name for a trust group matches the trust group, verifying that the other device sending the trust group membership certificate is a member of the trust group" in (Col 5 lines 1-20).

Art Unit: 2135
